What changed

AI solution positioning

- Catalog repositioned from HTML templates to AI-based solution ideas.
- Solution-specific descriptions, metadata, schema, sitemap, and LLM guidance.
- Source downloads presented as prototypes and implementation references.

Premium conversion design

- New trustworthy technician hero with local project asset.
- Proof metrics, verified-style reviews, project gallery, guarantees, and service specialization.
- Mobile call, booking, and text actions.

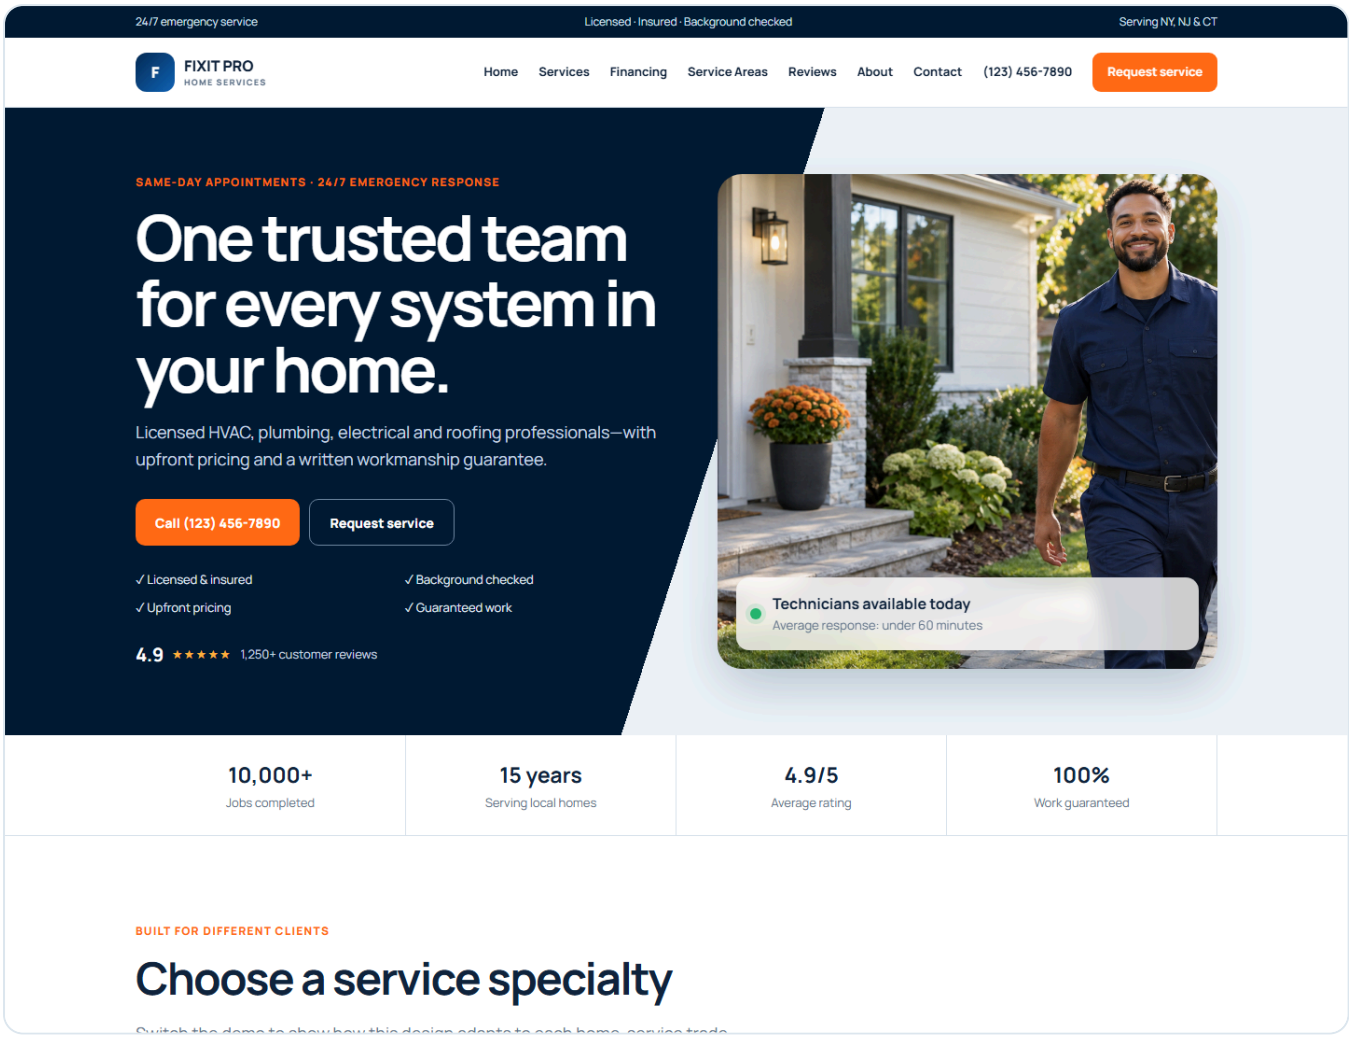

End-to-end delivery

- Dynamic production possibilities based on each solution category.
- Optional multilingual setup, responsive refinement, branding, and custom development.
- Project-specific contact context and feasibility notice.

Responsive inner pages

- Shared 1160px alignment grid for headers, content, and footers.
- Native-style mobile navigation drawer and touch-friendly controls.
- Darker, consistent inner-page banners with accessible contrast.

AI-assisted problem and cost estimation

The solution now offers two complementary estimation experiences: a compact homepage estimator and a dedicated full-page AI estimate workspace.

1

Describe the issue
Users explain symptoms in plain language and may attach a problem photo.

2

Receive an AI estimate
The interface returns likely service, urgency, preliminary range, and visit duration.

3

Confirm professionally
A licensed technician verifies the issue and final price before paid work begins.

Supported classifications

- Plumbing
- Heating and cooling
- Electrical
- Roofing
- General home repair

Safety and transparency

- Emergency phrase detection for gas, smoke, sparking, flooding, and burst pipes.
- Clear non-binding estimate disclosure.
- Professional inspection required for final diagnosis and price.

Dedicated estimate-page design

- Dark analytical hero distinct from the homepage.
- Service selection controls and detailed problem intake.
- Sticky desktop result panel and mobile stacked layout.
- Separate professional assessment form with validation.

Important: The estimator is a front-end solution demonstration. Production AI behavior, pricing data, image analysis, safeguards, and service integrations should be scoped and validated for the operating business.

Search and discovery updates

SEO metadata

- AI-based solution titles and descriptions.
- Industry-focused keywords and Open Graph copy.
- Canonical URLs preserved to protect existing links.

Structured data

- Solution-oriented CreativeWork identifiers.
- Purpose, category, implementation use, and prototype context.
- Updated collection schema.

Sitemap

- Services route added at priority 0.95.
- Solution pages prioritized at 0.85 with weekly crawl frequency.
- Corrected per-solution modification dates.

AI discovery

- Updated llms.txt solution catalog.
- Clear distinction between prototypes and production delivery.
- Consistent solution terminology across the catalog.

Validation status

✓ Next.js production compilation passed

✓ 53 routes generated successfully

✓ Shared JavaScript syntax validated

✓ Downloadable Home Services ZIP rebuilt

✓ Desktop and mobile layouts visually reviewed

Production deployment method

The standalone Next.js build is deployed atomically behind Nginx and systemd. The previous build remains available as a timestamped rollback directory, and the public service is verified through HTTP and HTTPS health checks.
